C++ Programming

Polymorphism Homework 1

Mostafa S. Ibrahim
Teaching, Training and Coaching since more than a decade!

Artificial Intelligence & Computer Vision Researcher
PhD from Simon Fraser University - Canada
*Bachelor / Msc* from Cairo University - Egypt
Ex-(Software Engineer / ICPC World Finalist)

Homework Targets

- During solving the homework you should always consider
  - Remove Dependencies
    - Whenever class A depends on B, this is coupling
  - Polymorphism
    - When you have something that can have many forms, depend on some parent class.
Homework 1: Explain ATM-Machine UML

Img Src

- Like most of ATM Machine
  - You can check your balance
  - Withdraw or deposit money
    - E.g. from seperate parts

Homework 2: Square

Rectangle
draw()

Square

- A fresh engineer design the following diagram for some shapes relations
  - Why do you think he thought this way?
  - Figure Out a reason why it is incorrect? Provide a tip
  - How to fix the design.
    - Assume rectangle class is a heavy class (several functionalities and code).

Homework 3: Company Payroll

- We need to represent a company and its payroll:
  - Working people: either volunteers or employees
  - Employees could be hourly based or salaried based.
    - Also a commision salaried employee takes extra money as ratio of the sales he did
  - Also there are invoices, each invoice has set of items (books, Food, etc)
    - Each item has its own details (e.g. book author name)
  - The payroll should determine and pay money for whatever payable such as employee or invoice
- Assume after a few months later we needed:
  - A Labourer Employee which is a Hourly Employee
  - No new functions and variables at the moment
  - Should you add a new class for Labourer or just use the HourlyEmployee as an object?
- Develop the classes

Homework 4: Study JSON Library

- JSON is a standard text-based format for representing structured data
- You will study and use this [library](#)
  - Attached to the lecture: the library cpp file + a modified example by me
    - Run, Read the code, Guess the text structure
  - Then [Educate](#) yourself about JSON. Google more if needed
  - Then check out their library [interface](#)
  - Note: In future assignments/projects, you will use JSON
- Other popular market formats to learn: XML, YAML
